

Travel App (Name TBA)

CSE 111 - Project Phase 1
Andy Bui and Kenny Jung

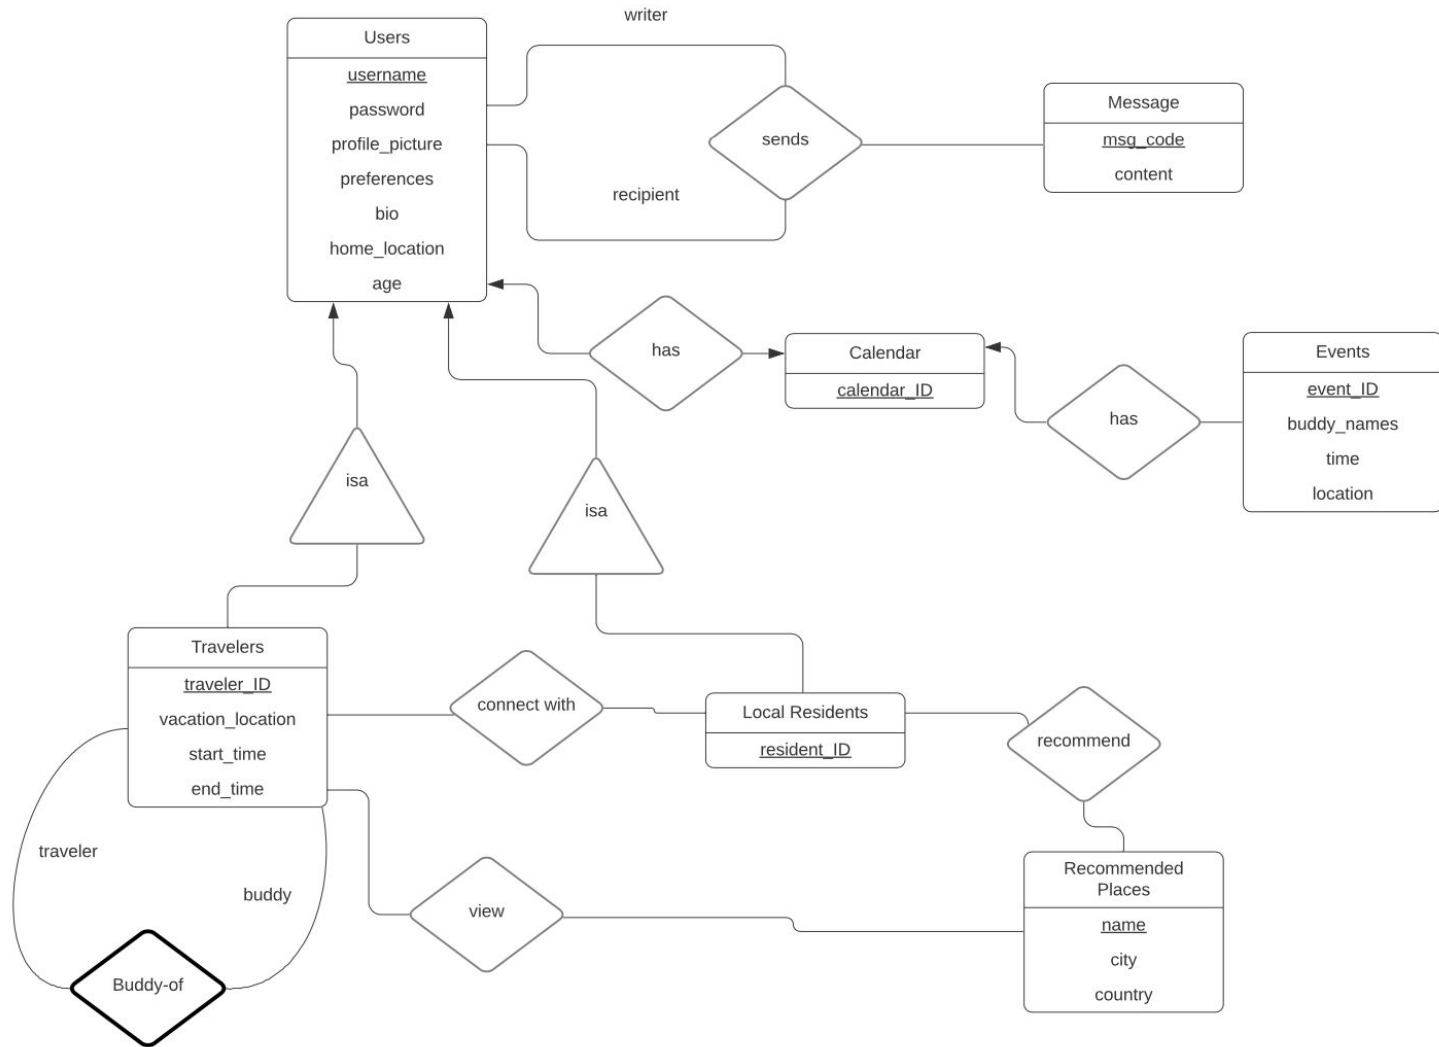

Description

- This app allows travelers to connect with local residents and get recommendations for places to travel
- Travelers can also connect with other travelers to go on traveling trips together
- After connecting, they can message each other and create events

Use Case Diagram

E/R Diagram

Relational Schema (Entities)

Users(username, password, profile_picture, preferences, bio, home_location, age)

Travelers(username, traveler_ID, vacation_location, start_time, end_time)

Local Residents(username, resident_ID)

Message(msg_code, content)

Calendar(calendar_ID, username)

Events(event_ID, calendar_ID)

Sent(username, msg_code)

Relational Schema (Many-to-Many)

sent(username, msg_code)

connect_with(traveler_ID, resident_ID)

view(traveler_ID, place_name)

recommend(resident_ID, place_name)

buddy_of(uTraveler_username, uTraveler_ID, bTraveler_username, bTraveler_ID)

Implementation Details

- React Native
 - Frontend and UI
 - We both have used React before, so gonna try React Native
- Node.js
 - Backend to fetch data from the database
- MySQL database
 - Relational database for our SQL queries
